# Installing the USB to Parallel adapter

When the TiePie USB to Parallel adapter is connected to a USB port of the computer, Windows will report new hardware.

The first time this is done, Windows will request for the location where the drivers can be found.

Wizard New hardware

Windows has detected the following new hardware:

USB Device

Windows can search for software that supports your hardware and install it. When an installation disk is provided with the hardware, place this in the drive and click Next.

What do you want to do?

○ Automatic search for a better driver (recommended)

● Specifiy the location of the driver (advanced)
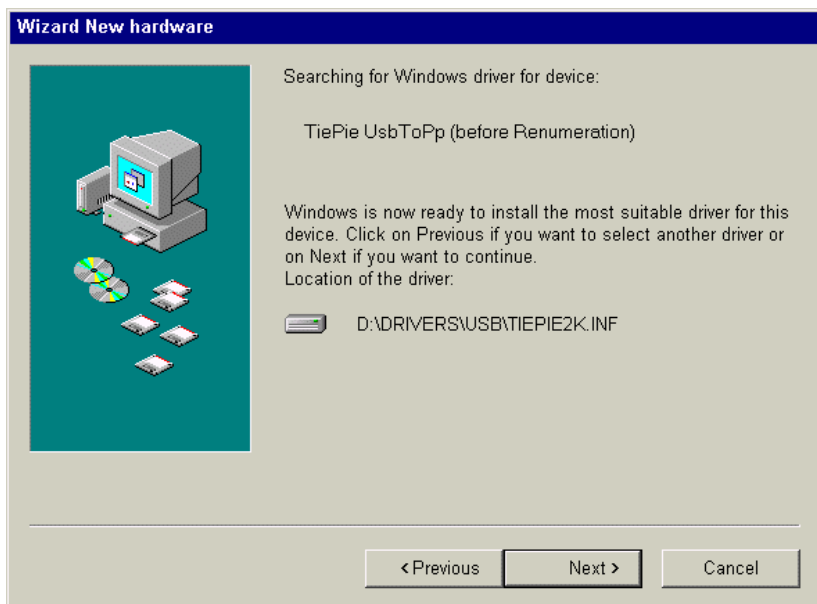

< Previous   Next >   Cancel

Insert the TiePie software CD in the CDROM drive of your computer. Select **Specify the location of the drivers** and click **Next >**.

Now a location for the drivers has to be specified:

Wizard New hardware

Windows will search for new drivers in the driver database on the harddisk and at

(•) Search for the best driver (recommended)

☐ Removable media (diskette, cd-rom...)

☑ Specify a location:

D:\Drivers\Usb   Browse...

( ) Show a list of all drivers at a specific location, so you can select the required driver.

< Previous   Next >   Cancel

Select **Search for the best driver** and check Specify a location. Use the **Browse** button to browse to the folder Drivers\Usb on the TiePie software CD. Then click **Next >**.

Windows wil now report that it has found the TiePie UsbToPp device:

Click **Next >** to install this driver.

Windows will now install the drivers for the TiePie USB to Parallel adapter. When the installation is complete, Windows will report:

The TiePie USB to Parallel adapter is now ready to use.

When the USB to Parallel adapter is disconnected, the required drivers will be removed from the memory of the computer.

The next time the USB insterface is connected, the required drivers wil be loaded again. The CD is no longer required for that.
